

# PORTNOX CLOUD

Unified Access Control & Security, Purpose-Built for MSPs

## Managing network security for your customers just got much easier

Ensuring an effective network security posture for all your clients is stressful. To help you relieve at least a little bit of that stress, Portnox is focused on delivering the security essentials your customers need to keep their businesses running smoothly. No complexity. No frills. No BS.!

### Easy

All the functionality your customers need from an enterprise-grade access control solution, without any complex configuration, expensive customization & on-going maintenance.

### Powerful

100% SaaS, true-cloud approach to network access control means you can deploy rapidly across your entire customer base without having to worry about on-premises hardware or hidden costs.

### Value-Driven

Portnox helps even the most skilled managed services teams get more done with the same great access control feature set and admin experience without having to pay a premium today or tomorrow.

## Cloud-native, multi-tenant & zero-trust

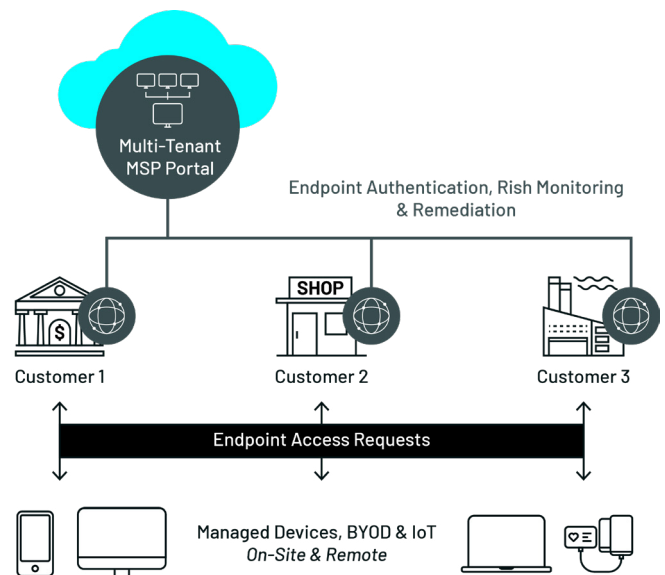

As a cloud-native platform, the Portnox Cloud requires no hardware and no maintenance whatsoever.

It allows you to enforce zero-trust access control, anywhere, anytime – for remote workers, campus workers, and campus devices.

And finally, it's multi-tenant – so you can manage the unique access needs of all your customers through a single pane of glass.

## MSPs save 30% off the top!

As part of our unique managed services program, we're offering MSPs better than average margins to help grow your business and provide best-of-breed access control and security to your customers.
