

CASE STUDY

Data Realty – Customer Success Story

About Data Realty

Data Realty's mission is to harness the power of data and use it to fuel the economic engine of growing companies, communities and people.

The Challenge

The challenge was to provide guaranteed and measurable security for our geographically diverse workforce to operate without tying us to a large/traditional or internal system AD or big corporate traditional network.

Data Realty has a large number of users/devices that work from home, office and travel worldwide. The computing needs of our workforce requires us to deal with data analytics for a wide ranging client base. Our developers work with critical data and are required to adhere to industry standard requirements and regulations in an open and auditable fashion.

Before working with Portnox, it was a significant challenge and investment of time to manage the fleet of PC's and Laptop computers to ensure 100% compliance with our data security protocols including anti-virus, consistently configured firewalls, compliance with critical patch levels in a timely fashion, and adherence to data encryption requirements.

The solution

With Portnox CLEAR Data Realty was able to meet all the challenges we had such as keeping current anti-virus signatures, ensuring internal policies are enforced regarding OS patch level, and ensuring that the disc-encryption is active as well as that passwords are required in order to login or return from screen saver.

It allowed us to guarantee compliance with our external auditing regulations and to see this compliance in real time as needed.

Portnox CLEAR was installed without any assistance. It is easy to maintain and has been reliable. We manage it without any issues and it keeps us secure and compliant.

...Portnox CLEAR has given us the means to maintain a safe, secure, and compliant work force in a simple and automated fashion. It has also provided an easy way to track and demonstrate this compliance as needed in order to satisfy regulatory requirements with minimal effort.

– Thomas Panozzo, CTO, Data Realty
