

Portnox CLEAR

Delivering Enterprise-Grade WiFi Security,
in MINUTES.

VALUES AT A GLANCE

- **Rapid Deployment** – Gain enterprise-grade WiFi security in minutes with pre-set infrastructure that requires no prior training.
- **Seamless Authentication** - No more sharing WiFi passwords. Move to individual user-credentials or auto connect via certificate.
- **Zero-Touch Management** – Thanks to a cloud-delivered RADIUS server and no on-premises hardware/software maintenance and upgrades. CLEAR is always running the latest version.
- **Flexible Access Controls** - Use device posture assessment to drive your policy with Dynamic VLAN or ACL assignments. Block or divert unknown devices, including BYOD.
- **Total Device Visibility and Accountability**- See all devices on your network and easily search to locate users and devices.
- **No Vendor Lock-in** – CLEAR works with any wireless infrastructure.
- **Secure & Trusted Cloud Service** - SOC2 Type 2 Certified. Full data encryption in transit and at rest.
- **Accessible**- Subscription model that fits the scalability requirements of any growing and mid-size enterprise.
- **Easily Extends** - Ready to easily extend to other access layers (wired, VPN).

ABOUT PORTNOX

Portnox provides simplified network access control and management solutions that enable organizations to reduce risk and enforce security policy compliance. The company's products provide automated security, visibility and control for every device accessing the network including Internet of Things (IoT), BYOD, mobile and managed systems.

Securing your Wi-Fi access has its challenges

Are you using a pre-shared password to access the office Wi-Fi network? What happens with that known-to-all password when an employee leaves the company? Do you think about securing your network access with individual authentication, but dread a complicated and expensive deployment process?

Employees tend to share the WiFi password with contractors, guests and building colleagues, endangering the company's network security. Unauthorized connections to your office WiFi network allow endpoints to bypass all perimeter security tools, including the Firewall, potentially obtaining full administrative control.

Recent studies indicate that 1 out of 5 SMBs experiences a data breach by former employees, taking advantage of their remaining access. In fact, disgruntled ex-employee hacks have been listed as the top concern out of all cyber-attack origins.

The solution: Portnox CLEAR cloud service

- **Enterprise-grade security** – individual authentication to your WiFi with credentials or certificates using 802.1X industry standard.
- **No overhead** – Sign-up online and deploy the service in minutes (cloud-delivered).
- **Affordable** – Flexible subscription packages.

Benefits: Simple.

A

One click to create your own RADIUS tenant in the cloud

B

Configure your SSID to work with your RADIUS

C

Determine Authentication scheme

D

Done (Within minutes)

Enterprise-grade authentication for any organization size.

With Portnox CLEAR there are no shared passwords or frequent network credential updates, and you always know who is using your Wi-Fi. CLEAR also eliminates cumbersome integrations and RADIUS server setups that require skilled IT staff and extensive training.

Securing the access to your WiFi can now be done easily and quickly with both user and device authentication that comply with security regulations.

AVAILABLE ONLINE OR VIA MSPs/MSSPs

Portnox solutions are available online or provisioned by leading Managed Service/Managed Security Service Providers.

BUILT-IN SYSTEM COMPONENTS

CLEAR RADIUS: Cloud-based RADIUS server and authentication

CLEAR AD Broker: Optional lightweight software supporting on-premise AD authentication and access controls

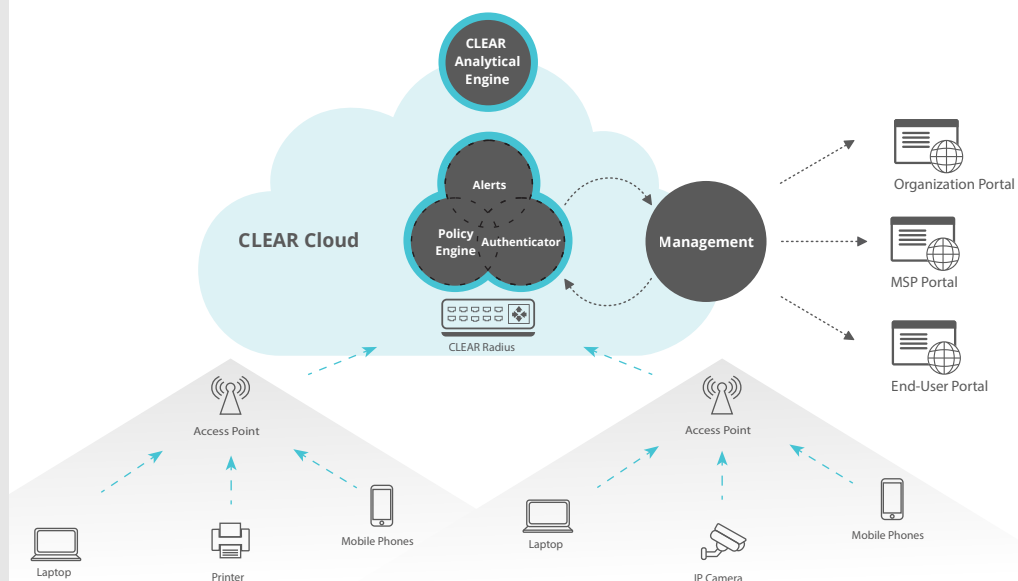

CLEAR Analytical Engine: Continuous awareness of device risk posture and alignment to policy

CLEAR Guest Management: Add-on offering robust management as well as guest/ contractor access controls

Vendor-agnostic authentication.

We don't want you to remember another password. Portnox CLEAR includes built-in connectors to all common directory types, including Active Directory, Open LDAP as well as cloud directories such as Azure AD (Office 365) and G-Suite. Should you choose to work with certificates, CLEAR will either serve as your Root CA for enrollments, or use the existing PKI without any on-prem components.

STOP compromising on weak and ineffective WiFi Security. Upgrade to CLEAR enterprise-grade WiFi in less than 10 minutes.

Testimonials

"Portnox is one of the best options to manage our access to the network. It is so useful in preventing attacks against our networks. While many solutions are expensive and have compatibility problems, Portnox offers a 100% coverage for a very low price."

Marketing Staff in the Retail Industry, Jan 2019

"This product is very useful, simple, reliable and securable. Portnox support is very strong. The licensing is very simple. I love Portnox."

Company Manager in the Services Industry, Sep 2018
