PORTNOX CLOUD

Universal Zero Trust Access Control

Enterprise access, reimagined.

Portnox Cloud enables passwordless universal zero trust access to critical resources—spanning users, applications, AI entities, and networks.

NETWORK ACCESS CONTROL

Every breach starts with access. Block unauthorized devices before they connect with cloud-native NAC.

SECURE REMOTE ACCESS

Zero Trust Network Access (ZTNA) enforces least-privilege access to only the right applications—never the entire network.

INFRASTRUCTURE ADMINISTRATION

Control and audit privileged access to network infrastructure and meet compliance needs with cloud-native TACACS+.

ALWAYS ON AUTHENTICATION

Strengthen security while reducing operational overhead with RADIUS authentication that integrates with your existing identity stack.

"We did not have a lot of visibility into what was being plugged into the network. We didn't have any sort of port security at all. The biggest pain point was tracking down rogue devices on the network."

IT SECURITY ADMINISTRATOR, UTILITY

* Forrester, Total Economic Impact Study of Portnox Cloud (2026)

# The network perimeter is a thing of the past

Modern networks need modern solutions. Today's network perimeter is wherever the farthest connection lies—on-premises or halfway across the world. Regardless of who and what is connecting, and where, every connection must be protected.

Portnox Cloud delivers universal zero trust access control that reduces the attack surface, enables secure access fast, and operationalizes zero trust continuously—across users, devices, apps, infrastructure, and now AI pathways.

Portnox's **award-winning**, cloud-native platform unifies network access control, application access, and infrastructure administration —without hardware, maintenance, or operational drag.

REDUCE ATTACK SURFACE
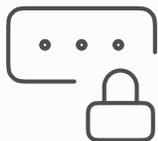

Go passwordless to remove credential-based attack vectors

No passwords to steal
No credentials to phish
No Helpdesk resets

REALIZE SECURE ACCESS

Connect users and devices to the apps and networks they need — and nothing more.

Security that enables productivity

REDEFINE ZERO TRUST

Enforce policies automatically for users, devices, and AI agents.

When risk increases, access is revoked

ENTERPRISES TRUST PORTNOX

- Cloud native platform
- Universal zero trust access control
- Passwordless authentication
- Identity and role-based access
- Dynamic posture assessment
- Automated remediation
- Compliance and logging
- Vendor agnostic

Portnox has allowed us to get our other systems much more in line with the framework that we set up with the segmentation... both on network and off-prem... it's a lot simpler."
